1. The 5-2-03 amendment has been received.
2. Claims 1-7 remain alive.
3. In view of applicant's remarks, an updated search has uncovered some new art.

This action is not final.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-6 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Kerner et al.

In the cover figure of the reference, hybrid circuit 4/5, metal cover 3 and molded or metal bottom (see col. 6 for metal) are clearly seen. The bottom or open side of three has plug and pins 6/61 which meets the interconnect pin details. The bottom would have heat sink capabilities even if not of metal. Therefore the claims read on the reference. However, if metal is used, as is provided for in column 6, it would have been obvious to insulate the pins from the metal--- glass such seals are well known in the art for this purpose. Although the reference shows all but this insulation, such would have

been obvious as explained above to protect the pins from shorting against the bottom. The dependent claim compatibilities, track and adhesive details are present in the reference.

7. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kerner et al taken with Tugco.

Kerner provides all, but lacks a showing of inner partitions. Tugco clearly provides the partitions in a similar device. It would have been obvious to provide the Tugco partitions in Kerner for the purpose of separating different functional elements from each other and making repair or replacement of parts easier.

8. Note Stevens' pin (earlier cited) and the similar sealed housings of the other three references cited herein.
